When I was starting out in Visual C++ programming, I was given this book. This has to be the best written book I have read on a programming language. This author really knows how to explain technical material in an enjoyable manner. If you wanna learn Visual C++ the correct way (because the book is packed with great style pointers) GET THIS BOOK

The book teaches you from the ground up about MFC programming in VC++. You don't need to know much to start and by the end of the book you're writing great programs. I love the book and I think everyone else would too.
