My Visit To The Dinosaurs (Let's-Read-and-Find-Out Science 2)

Synopsis

Dinosaurs are extinct now, but you can visit dinosaur skeletons in a museum. There you will meet Brachiosaurus, Stegosaurus, and Diplodocus and learn how they ruled the earth millions of years ago. You'll see dinosaurs with over 1,000 teeth, dinosaurs who could swim, meat-eaters and plant-eaters. And, of course, you'll meet the king of all dinosaurs, the gigantic Tyrannosaurus rex.

Aliki's 'My Visit to the Dinosaurs' is an exciting and scientifically accurate adventure through the dinosaur hall of a museum of natural history. Children from pre-school up will enjoy their tour through this fascinating world through the eyes of a child. The supplemental audio cassette is well recorded and easy to follow, an excellent way for your little one to learn how to read and increase their vocabulary. Occasional comments by Prof. Franklin Branley, former Director of the American Museum of Natural History in New York City are an added treat.

My visit to the Dinosaurs is a book I would recommend to any kid. This book is a very good book that has lots of pictures and teaches you a lot about dinosaurs. This book takes you through a dinosaur museum as you follow a young boy and his Father and sister. They give you cool facts that

you might not have known about Dinosaurs. they show you all kinds of dinosaurs, small, tall, short and long. They tell you how you find Dinosaurs and other exciting facts. this book in my mind is deffently one of my favorite children books.

My 5 year old son really enjoyed this book. It has good content at a reasonable length that held his attention. The art work is also good. It is simply a good book!

Both of my sons enjoy this book...over and over and over. Anything about dinosaurs is popular, but this book even provides good educational information.

If you are planning a trip to a museum this might be an excellent book to share. It would give young children an idea of what to expect. For dino enthusiasts-- they'll be introduced to the idea of how these huge fossils are mounted in the museum. They'll see how plaster casts are made of the bones and how iron rods hold them together. This book also shows paleontologists working in the field, and out of all the books in this series, this is the one that has the most information about individual dinosaurs. It's at the 3rd Grade reading level.

My 4 year old loved this book. It's just the right blend of story, science/identification of dinosaurs and has great illustrations. We read it twice in a row.
