First, I must make it clear that I have interacted with this book in ways which the average reader probably never will. For starters, I myself am in the process (though currently paused) of earning a degree in a psychology field. This was, in fact, one of the reasons I selected this book. However, my academic appreciation for *Anatomy of the Soul* did not keep me from appreciating it on other levels. I'll attempt to briefly discuss a few of them below. Literary, Dr. Curt Thompson is a master storyteller. I'm willing to admit that my own interest in counseling/psychology probably has a lot to do with my fascination of his stories, but he illustrates his points in a fascinating way through real-life examples.

On the other hand, his metaphors can be over-exaggerated at times, and he has accepted too many of the modern chic elements of writing, but the book is definitely engaging and well-written. The structure of the book does oscillate between the scientific, theological, and practical, but Thompson does an excellent job of keeping each type of section compelling. One fairly major quibble with the book format is the way in which his Integration Exercises have been randomly inserted throughout the book. These are several hands-on exercises, described in a page or two, which readers may use to help integrate Thompson's points into their lives. The idea of including these exercises was brilliant, but they occur in random places, many times breaking up sentences or paragraphs. The first few confused me greatly since the only differentiation between them and the surrounding text is a slight change of font. The biggest problem with this approach, besides being confusing, is that the readers will probably skip them to finish the rest of Thompson's thought and forget to come back.

"Anatomy of the Soul - Surprising connections between neuroscience and spiritual practices that can transform your life" by Curt Thompson is a compelling read! Despite what science has tried to get us to believe, neurology and spirituality are connected. I have long been a believer in the power of our mind, and when I saw the subtitle to this book, I was immediately intrigued. Author Curt Thompson does a great job explaining for the average reader just how this is possible. Most reviewers of this book have given a general overview, but something has been on my mind all my life, growing up with a family member who is an atheist. Never for one minute understanding how that person could possibly not have any faith, not believe in God.....I could not wrap my brain around that. Or why some people can easily share their faith, willingly and openly pray with their families and friends, yet others just cannot imagine doing so? Then along comes this book and it is explained to me, so I am thrilled to share this part of the book with you. Dr. Thompson explains that our attachments from childhood can make all the difference. There are 4 attachment possibilities:~~~~~1. Secure Attachment: Children who are blessed to become securely attached have one common theme - their emotions were validated during childhood. They had parents who were empathetic. As an example, let's say Sally is crying because she has scraped her knee. An empathetic parent would come to her aid asking how she is doing rather than curtly telling her to stop crying like a baby. These children feel understood and connected, and the universe makes sense to them.
