What Are Food Chains And Webs? (Science Of Living Things (Paperback))

Synopsis

Sunlight does not go very deep into water so seaweed must grow at the surface where its rays can reach them. Starting with the sun, food chains link together plants and animals in various ecosystems to help them survive. Intended for children of ages 6-12, this book describes these connections in a clear manner.

Age Range: 7 - 10 years

Grade Level: 2 - 5

Customer Reviews

This was an easy to read book on the food chains and webs. My students were able to tell learn and know the difference between food chains and webs.

This puts everything I teach into one book for students to use. They get stuck on a topic and want to read all they can get their hands on. Perfect match to my curriculum.

This book has very colorful pages, good information for children, and enough detail for young children to understand. Wonderful book!
